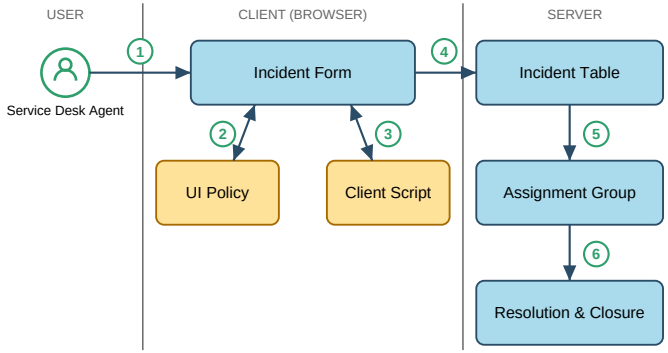
Project Design Phase-II
Data Flow Diagram & User Stories

Date	3 October 2026
Team ID	SWTID-2026-3849
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	

Data Flow Diagrams:

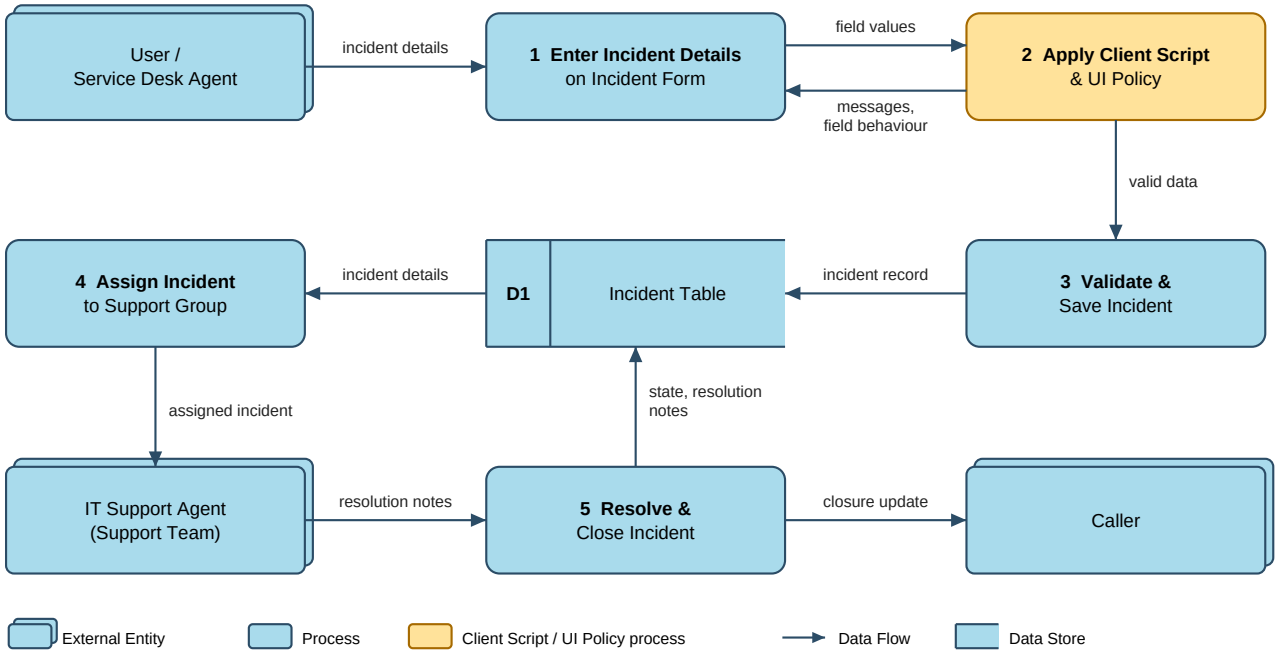
A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Flow: (Simplified)



1. Service Desk Agent opens the Incident form and enters the Caller and Incident details.
2. UI Policy makes fields mandatory, visible or read-only based on field conditions.
3. Client Script validates the entered values and shows messages when the form is changed or submitted.
4. The validated Incident is saved as a record in the Incident table.
5. The Incident is assigned to a support group and an IT Support Agent.
6. Resolution Notes are entered and the Incident is Resolved and Closed.

DFD Level 0: Incident Management with Client Script & UI Policy



User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent	Incident Creation	USN-1	As a Service Desk Agent, I can create a new Incident by entering the Caller, Category, Short Description and Description on the Incident form.	I can submit the Incident successfully when all required details are entered.	High	Sprint-1
Service Desk Agent	Incident Creation	USN-2	As a Service Desk Agent, I can select the Impact and Urgency on the Incident form so that the Priority of the Incident is set.	I can see the Priority value on the Incident after saving.	Medium	Sprint-1
Service Desk Agent	Client Script	USN-3	As a Service Desk Agent, I get an error message if the Short Description is empty or too short when I submit the Incident.	The Incident is not saved until a valid Short Description is entered.	High	Sprint-1
Service Desk Agent	Client Script	USN-4	As a Service Desk Agent, I receive an on-screen message when I change Impact or Urgency to High so that I can confirm the value before saving.	The message is displayed as soon as the field value is changed.	Medium	Sprint-2
Service Desk Agent	UI Policy	USN-5	As a Service Desk Agent, I can see the Caller, Category and Short Description fields marked as mandatory on the Incident form.	I cannot save the Incident when a mandatory field is empty.	High	Sprint-1
Service Desk Agent	UI Policy	USN-6	As a Service Desk Agent, I can see the On Hold Reason field only when I change the State to On Hold.	The field is visible and mandatory for On Hold and hidden for other States.	Medium	Sprint-2
IT Support Agent	Incident Management	USN-7	As an IT Support Agent, I can update the State and add Work Notes on an Incident assigned to me.	The updated State and Work Notes are saved in the Incident record.	Medium	Sprint-2
IT Support Agent	Incident Management	USN-8	As an IT Support Agent, I must enter Resolution Notes and Close Code when I set the State to Resolved.	The Incident is resolved only after Resolution Notes and Close Code are entered.	High	Sprint-3
Incident Manager	Incident Management	USN-9	As an Incident Manager, I can assign an Incident to a support group by selecting the Assignment Group and Assigned To.	I can see the Incident in the queue of the selected Assignment Group.	Medium	Sprint-2
Incident Manager	UI Policy	USN-10	As an Incident Manager, I can see the Incident fields as read-only once the State is Closed so that closed Incident details are not changed.	I can view the closed Incident but I cannot edit its fields.	Low	Sprint-3
Administrator	UI Policy	USN-11	As an Administrator, I can create UI Policies on the Incident form to make fields mandatory, visible or read-only.	The UI Policies are active and the fields change as per the conditions.	High	Sprint-1
Administrator	Client Script	USN-12	As an Administrator, I can test and update the Client Scripts and UI Policies on the Incident form to improve usability.	I can confirm that the Incident form works correctly after testing.	Low	Sprint-3
