Project Proposal (Proposed Solution) report

This proposal aims to improve the ServiceNow Incident form using Client Scripts and UI Policies, so that field behaviour is controlled in the browser, users are guided, and incorrect data entry is reduced. Key features include a UI Policy with an action on Urgency and onChange, onSubmit and onCellEdit scripts.

Project Overview	
Objective	To improve the ServiceNow Incident form by implementing Client Scripts and UI Policies that control field behaviour, guide users and reduce incorrect data entry.
Scope	Configure a UI Policy, a UI Policy Action and onChange, onSubmit and onCellEdit Client Scripts on the Incident table (Milestones 1-5), then test the configuration (Milestone 6).
Problem Statement	
Description	The Incident form accepts incorrect or inconsistent data, such as an Impact and Urgency that do not match, because it has no client-side rules.
Impact	Fixing this gives cleaner incident data, less rework for agents, better priority handling and a smoother experience for service desk users.
Proposed Solution	
Approach	Use UI Policies to control field behaviour (for example, making Urgency read-only for high-impact incidents) and Client Scripts to react to changes and validate data in the browser.
Key Features	- UI Policy “High Impact Control” makes the Urgency field read-only.

	- onChange script sets Urgency to High when Impact is High. - onSubmit and onCellEdit scripts validate saves and inline edits.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop or PC; processing runs in the ServiceNow cloud
Memory	RAM specifications	4 GB RAM or higher
Storage	Disk space for data, models, and logs	Minimal local storage; records stay in the cloud PDI
Software		
Frameworks	Platform / framework	ServiceNow Now Platform
Libraries	APIs and libraries	ServiceNow client APIs (g_form, g_user)
Development Environment	Tools / IDE	Script Editor, Chrome
Data		
Data	Source, size, format	Sample incidents created in the PDI (incident table)
